

Meta-SERGE Evaluation Survey

Participation Agreement

To participate, you must accept each of the following statements. If you do not agree, close this tab.

1. I confirm that I have read and understood the information on the Prolific homepage relating to this study.
2. I understand that no data that could personally identify me will be collected.
3. I understand that my participation is voluntary and that I am free to withdraw from the project at any time, without having to provide reasons and without any consequences.
4. I understand that the data collected up to the time of my withdrawal cannot be deleted, as it cannot be traced back to me personally.
5. I understand that my completely anonymized data will be used for the research purposes indicated above and described in detail in this questionnaire.
6. I understand that my completely anonymized data may be used to support other research in the future and may be made publicly available (in anonymized form) for the benefit of other researchers.
7. I agree to take part in the study.

Do you accept the above statements? If you do not consent, close this tab.

- ☒ Yes, I agree to participate in the study.
-

Risk Management

1. We are in the Risk Identification stage. We are going to consider as **Triggers** factors such as (1) General discontent and fatigue, on the part of team members, due to stress given by the work; (2) Artefacts made with delays on the schedule; (3) Artefacts of poor quality due to excessive stress of Team Members;

What is the risk we are considering given the **combination** of the Explicit Triggers?

- A. Delays on the delivery of artefacts
- B. Low team member skills
- C. Absent cliente and stakeholders

D. Error in estimation and scheduling of activities and resource allocation

2. We are in a monitoring phase; we are looking at events to understand what risks are occurring. We consider the risk related to the **quality of the artefacts**. Customer **feedback** regarding the progress of the project, the implementation of the requirements and any improvements to them is considered as:

- A. Prevention Plan
- B. Contingency Plan

C. Trigger

- D. Condition to satisfy

3. We are nearing the final delivery of the project (last sprint of two weeks). We are going to perform a check on the produced artifacts of our Team Members and we realize that some of them are incomplete. How do we go about **preventing** a possible delay in the delivery of artifacts for the final sprint?

- A. We increase the number of Team Members (more team members = more parallelization of work)
- B. We focus only on the most important artifacts to deliver at least those
- C. We request an extension of the delivery date to the Product Owner and Customer
- D. We carry out a new resource and time schedule with the goal of getting back on schedule.**

4. During a check related to the progress of the project, one realizes that the artifacts that have been delivered have **ambiguities** and **conflicting** elements/components. This may be due to:

- A. Low skill of team member
- B. Technologies that are not appropriate for the realization of such an artefact
- C. Arguments and poor communication among Team Members**
- D. Low domain knowledge

5. We find ourselves identifying possible risks in our project. We are looking at a risk closely related to our Client (**Unrealistic Requests**). In the description of this risk we identify, "The client makes unrealistic proposals (impossible to achieve with the current budget and resources). At each project check, changes are requested on the implemented features, as they do not reflect what he asked for, and/or new features to be added." A **Trigger** for such a risk is:

- A. Invasive and overly present client behavior
- B. Complex project and domain low known by team members
- C. Low Business Value
- D. Lack of clarity in client's ideas**

6. Time to Market represents the most important delivery to meet. More importantly, it is essential to meet it in order to beat possible competitors to the punch. What risks are most likely to occur if you aim to meet time to market, i.e., the **project deadline**, while also meeting product quality constraints?

- A. Delays on delivery and Error in effort and estimation**
- B. Incorrect and/or incomplete functionality and dissatisfied Customer
- C. Dissatisfied customer and low Business value
- D. Delay in delivery and low quality of artifacts

Risk Identification

Context:

The client asks to implement a project with the aim of providing a tool to support the definition of work strategies in accordance with the principles dictated by **Smart Work (SW)**, such as flexibility and virtualization. It will be possible to both reserve office space and reserve a workstation in a common room. Specifically, the system will need to support:

- Internal communication among all stakeholders (both those who will be working in the office presence and those who will be in SW) ;
- Organization of smart working days;
- Organization of workstations (reservations, etc...);
- Monitoring of the smart work process by managers;

Project Data Sheet

- Team Member :
- Number: 5;
- Experience: 2 years (middle)
- Team Working: have collaborated for 1 year (high)
- Deadline: 2 month;
- 3 Sprint, each of 20 days;
- Cost: 10.000 €;
- Development Model: Framework Scrum, Agile

What is the probability that the risks under consideration will occur?

Risks	Very Low Probability (0%-20%)	Low Probability (20%- 40%)	Moderate Probability (40%-60%)	High Probability (60%- 80%)	Very High Probability (80%-100%)
Low Domain knowledge					X
Delay in delivery			X	X	
Poor participation and Lack of dedication to the common goal		X	X		
Poor Communication and Internal Arguments	X	X			
Low-quality Artifacts			X		
Estimation error in the scheduling of activities and resource allocation	X	X			
Design choices negatively impact code quality					X

Risk Identification

Context:

It is intended to create an application to support user health and in collaboration with different Health Services. Key features will include:

- Booking a medical examination;
- Enter/Remove a medication to be taken, setting a reminder of when to take it;
- Ability to create one's own medical record with the results of all examinations performed.

Project Data Sheet

- Team Member: 7;
- Deadline: 10 weeks
- 5 Sprint each of 2 week;
- Cost: 14.000 €;
- Development Model: Framework Scrum, Agile

Risks

- Risk with Probability 75% - 100% :
 - Delay in delivery
- Risk with Probability 50% - 75% :
 - Low domain knowledge
 - Estimation error in the scheduling of activities and resource allocation
- Risk with Probability 25% - 50%
 - Low-quality artifacts
 - Design choices negatively impact code quality
 - Poor participation and Lack of dedication to the common goal
- Risk with Probability 0% - 25% :
 - Poor Communication and Internal Arguments

What are the ideal resources to have, indicate a value between very low (not very necessary) and very high (very necessary)

Risks	Very Low	Low	Middle	High	Very High
Additional time for delivery			X	X	
Domain Knowledge			X	X	
Project Manager/Scrum Master with High Experience					X
Problem Solving					X
Interaction with the Client/ Applicant			X	X	
Team Working		X	X		
Knowledge about architectures and technical debt		X	X		

Feedback on your experience with Meta-SERGE

We ask you to express your level of agreement with the following statements regarding your experience with **Meta-SERGE**. For each statement, use the response scale from "**Strongly disagree**" to "**Strongly agree**," choosing the value that best represents your opinion.

1. During the process of learning risk management through simulation, I think I would like to use SERGE frequently.

Strongy Disagree						Strongy Agree
---------------------	--	--	--	--	--	------------------

2. I found SERGE more complicated than Middle.

Strongy Disagree						Strongy Agree
---------------------	--	--	--	--	--	------------------

3. I found SERGE easy to use.

Strongy Disagree						Strongy Agree
---------------------	--	--	--	--	--	------------------

4. During the process of learning risk management through simulation, I think I would need the support of a person with technical knowledge in order to use SERGE.

Strongy Disagree						Strongy Agree
---------------------	--	--	--	--	--	------------------

5. I found that the various functions of SERGE are well integrated.

Strongy Disagree						Strongy Agree
---------------------	--	--	--	--	--	------------------

6. My experience with SERGE seemed inconsistent in several aspects.

Strongy Disagree						Strongy Agree
---------------------	--	--	--	--	--	------------------

7. I assume that the majority of people would be able to learn how to use SERGE quite rapidly.

Strongy Disagree						Strongy Agree
---------------------	--	--	--	--	--	------------------

8. I found SERGE to be rather cumbersome to use.

Strongy Disagree						Strongy Agree
---------------------	--	--	--	--	--	------------------

9. I felt very confident in using SERGE

Strongy Disagree						Strongy Agree
---------------------	--	--	--	--	--	------------------

10. I needed to acquire considerable knowledge before I was able to begin using SERGE.

Strongy Disagree						Strongy Agree
---------------------	--	--	--	--	--	------------------

11. If you would like, please provide a final comment or suggestion regarding your experience with SERGE. Which aspects did you appreciate the most, and which do you believe could be further improved?
